

Dresden Summer School in Systems Biology

July 23-31, 2016

EJBS Weisser Hirsch,
Dresden, Germany

Course focus: Spatiotemporal Modeling and Simulation of Biological Systems

Computational modeling and simulation are becoming indispensable to the life sciences. This summer school provides lectures and tutored hands-on training in computational methods for spatiotemporal modeling and simulation of biological systems. The school is intended for Master-level students with a background in computer science, physics, engineering, mathematics, or related areas. The participants will be introduced to powerful modeling and simulation methods, and have enough time and supporting tutors to implement and try all of the taught concepts and methods themselves. The course will consist of lectures in the mornings and tutored hands-on training in the afternoons, where participants work in small groups to solve a competitive challenge problem.

Lecturers:

Dr. Lutz Brusch (TUD), Dr. Rajesh Ramaswamy (MPI-PKS), Prof. Dr. Ivo F. Sbalzarini (CSBD, TUD, MPI-CBG)

Venue:

The course is hosted in the stunning and inspiring EJBS, a marvel of modern architecture in one of Dresden's most scenic districts directly by the forest park. On-site accommodation is available for all participants.

Registration and Fee:

Registration at www.sysbioschool-dresden.de is now open! Registration deadline is April 10, 2016. Registration fee (all-inclusive, full-board accommodation on site) is EUR 100 for Master students and EUR 500 for PhD students and postdocs. **15 travel stipends are available.**
